

## **Technical Details for Solid Fuel Aga (notes for site preparation)**

### **Flue**

The existing chimney should be of sound condition. Any other queries with regards chimneys, please contact us. If you need a prefabricated flue it need to be double insulated class 1 with an internal measurement of 5 inches.

Flue may exit horizontally or vertically from the Aga. Flue centre is 18 3/8 inches from the right edge and 2 ½ inches from the back of the Aga.

We **strongly** recommend that an OH cowl be fitted to your existing chimney.

### **Ventilation**

We recommend that a permanent air vent with a minimum effective area of 5 inches square (or the sectional area of the pipe, whichever is the greater) should be provided. It should be on an outside wall in a high position.

### **Fuel**

Smokeless fuel – Anthracite or Phurnacite.

### **Hot Water**

All Agas with the hot water facility **must be connected to a gravity flue system (which must be indirect)**. Water pipes can exit from either the left or right of the Aga.

The hot water tank must be sited no more than 18 feet away; otherwise heat efficiency may be lost.

Water pipe size 28 mm

Centre of flow pipe to base of cooker is 27 inches (approximate).

Centre of return pipe to the base of the cooker is 21 ½ inches (approximate).

Both pipes are 4 inches from the back of the cooker to centre pipe (traditional) and 2 ½ inches (delux): width to be 58 5/8 inches (4 oven) and 38 7/8 inches (2 oven) and the height is optional.

### **Fitting cost**

Our experienced and trained fitters carry out installation and the cost includes labour, all copper and brass fittings, plumbing fittings but not the cost of any vitreous enamel flue pipe. These prices are listed overleaf. We would expect to arrive to a fully prepared site, i.e. that the flue/ chimney is in good repair, the water pipes are ready, and that the base/plinth is installed.

Our charges do not include flue materials, building, and plumbing or site preparation.

**Please note that the Aga will be delivered ready assembled.**

The above site preparations details are to be used only as a guide and must be used in compliance with the local building regulations

**Servicing**

We recommend that the Aga is cleaned out every month and the chimney is swept once a year.

**Guarantee**

The Aga has a 12 months guarantee.

**Cleaning**

We recommend that only warm water and a mild detergent be used on the cooker. For further advice, please telephone us.

**Utensils**

The Aga is supplied with one wire tray and two flat trays. More are available at extra cost.
